

**Konstantinos Haniotis** is a graduate of the London School of Economics (Master of Science). Innovation and the use of new technologies has always been his passion. He participated in the development of innovative tools and companies throughout his professional career, in various sectors of the economy. In 2000 he founded Telenavis with the aim of using new technologies to develop innovative applications for intelligent transport and logistics. Core of applications are the use of new technologies, information technology, space and communications, the internet, smart devices, sensors. Since 2000, Telenavis has created dozens of innovative software products and services, and has participated in a significant number of research projects, having expanded beyond the Greek borders, in the Middle East and Europe. Today he is CEO of Telenavis, President of the Institute of Logistics & Management, Vice President of ITS Hellas, Vice-President of the European Logistics Association. He has participated in the committee for the elaboration of the Greek National Intelligent Transport Strategy, in the Telematics Applications Committee of ITS Hellas, in the Innovation Committee for Logistics of the General Secretariat for Research, in European and Greek Technology and Logistics Clusters, and has participated as a speaker on Intelligent Transport and Smart Cities issues in many international conferences and workshops.
